

CHANDLER SCIENTIFIC DEPARTMENT,
DARTMOUTH COLLEGE,
HANOVER, NEW HAMPSHIRE.

May 17. 1881
My dear Watson,

Please see to it, in the
revision of the Manual, that
the student can strike the
genus Prunus of Prunus
by means of the Key - the
Order is given on pp. 21, 22 & 23
of the Key, but none of these
references include Prunus
which has but one fruit -
The Garden Botany is all right.
Then again why not add to the
characters of paragraph April
"Stamens numerous, x x x and more cha-
racter the 3-lobed" (or lobes of the calyx,
as in Garden Botany - It's very
confusing to call the calyx tube
sometimes receptacle & then
again calyx, ^{under the} ~~structure~~

Asus's name is a little open
man that he would see
a Rose or Rose Calyx for
suspicious or genuine passion.
What wonderful spring
weather! Vegetation is now
two weeks in advance of last
year.

Please then have the Keys
made as clear as possible
for students as the bit
is a great big bear to
them. I try to get them to
learn the characters of the
great Orders & let the Key
go as soon as they can
find it.

Y^{rs} Henry B. Deane
